

Specifications:

Please amend the paragraph at page 4, lines 9-12 to read as follows:

As shown in Fig. 2, the base 11a may define a recess 15 into which at least a portion of a container 20 is received. The base 11a may further include a shelf ~~17~~ 32, which may be in the form of pair of shoulders that extend beneath the container 20 on either side of its neck 21.

Please amend the paragraph at page 4, lines 13-22 to read as follows:

A pump generally indicated by the numeral 25, is typically attached to or formed integrally with the container 20 for dispensing soap therefrom. As shown, pump 25 may extend downward from container 20 between the shoulders 17 of shelf 32. With reference to Figs. 3 and 4, pump 25 may, for example, be attached to the container 20 at a neck 21 extending downwardly from container 20, as by a threaded collar 40 that fits over the pump 25 and threads onto the neck 21. As shown, the pump 25 may include an annular rib ~~26~~ that rests against the rim at the open end of container neck 21, and collar 40 may hold the pump 25 in place by fitting there over. The nozzle 27 of the pump 25 protrudes axially outward from the collar 40, and, in the example shown, is moved upward to dispense soap from the container 20.
